

THE DILUTE SUPRAVERSE

gravity-scaled (conformal) so the foam is visible -- the void weighs $\rho_\Lambda \approx 6\text{e-}27 \text{ kg/m}^3$, so universes are isolated flat discs (slightly oblate from spin), not polygons. At LINEAR scale this frame is near-empty: neighbours sit $\sim e^{1/4}$ horizons apart ($l \sim 10^{84}$)
